What are the benefits of server Co-location?

Dallas - 2019-08-20 - in Co-Location

What are the benefits of server Co-Location?

The benefits to collocating are numerous. Our Network Operation Center (NOC) is equipped with backup power systems and generators that automatically step in if there is a power failure. This system can run indefinitely and power the entire NOC. This means if there is a local power failure, your server, websites, and other services will still be accessible world wide. Another benefit is the bandwidth. Since the server is located on our network, this would avoid line charges to transfer that bandwidth to another location, as well as any limits of bandwidth that occur in doing so. The available bandwidth for the server can be quickly and easily adjusted to meet your requirements. One more benefit is that the co-location equipment, along with all of our other dedicated services, are monitored 24/7, and we will notify you if your server stops responding.

Please contact Customer Support with any questions, comments, concerns, or feedback.
